

## Abstract

The invention is based on a method for cleaning vehicle windows by means of a wiper with a wiper strip (12), whose wiper lip (16) rests against the vehicle window.

5

The invention proposes that the wiper strip (12) be set into oscillations lateral to its longitudinal direction (20) during the wiping operation and/or shortly before it is begun.

### Reference Numerals

- 10 piezoelectric element
- 12 wiper strip
- 14 wiper blade rubber
- 16 wiper lip
- 18 support
- 20 longitudinal direction
- 22 connecting piece
- 24 wiping direction
- 26 wiper blade
- 28 profiled back
- 30 control unit
- 32 input signal
